

ADEQ Energy Audits

In 2009, ADEQ requested that Fann Environmental provide consulting services to review water systems and provide recommendations to them to increase energy efficiencies. ADEQ was provided a grant that funded this program. Fann Environmental reviewed motors, control panels and contacted electrical companies to review rates being charged to the water system. Recommendations were provided to the water company regarding upgrades on motors, finding rebates for installing electrical equipment and providing suggestions regarding electrical usage during peak and off-peak rates or changing rates.

Owner: Various Water System Owners
Final Construction Cost: \$168,900
Project Completion Date: February 2011

Fann Environmental Key Personnel:
Mike Young - Project Manager
