

ADEQ System Evaluations

Fann Environmental has been a consultant to ADEQ since 2005 to provide small and rural water system with system evaluations, vulnerability assessments, develop operation and maintenance manuals and provide technical assistance and training. This program has been funded by ADEQ and the Water Infrastructure Finance Authority (WIFA). This program helps water systems identify potential issues and provide methods for corrections without formally involving the regulatory agencies. The reports generated for the water companies can assist them in procuring funding through WIFA to make upgrades. Fann Environmental has completed over fifteen evaluations throughout the state of Arizona.

Owner: Various Water System Owners

Final Construction Cost: \$31,700

Project Completion Date: July 2009
