

Fort Defiance Water Treatment Plant Rehabilitation *General Contractor*

FE served as the general contractor on this project. This project included the removal of the existing treatment media; support screens and air scour piping. Repairs were made to supports and interior of vessels. New gravel, supports, and stainless steel air scour piping were installed and the vessels were filled with new green-sand media, conditioned, and put back on-line. New air solenoids were installed on the pneumatic valve actuators and the exterior of the vessels were prepped and repainted upon completion.
