

Prescott Airport Centrifuge Building and Equipment Installation *General Contractor*

FE served as the general contractor on this project, which included the installation of an owner-purchased Centrisys centrifuge sludge dewatering unit, underground piping, construction of a masonry building, electrical system work, and asphalt replacement. FE extended existing underground piping to supply the new equipment with waste material. Once installed, FE constructed the new building around the equipment and provided connections for future expansion. FE coordinated commissioning and start-up services between owner and equipment representatives.
