

City of Prescott Sundog WWTP Secondary Digester *General Contractor*

FE served as the general contractor on this project. This project included cleaning and recoating of a secondary digester, removal and replacement of digester mixers, upgrades to the structural building components, insulations of external mixing tubes, and painting/coating of the digester building and roof. FE designed and provided solutions when it was discovered that several metal structural supports within the interior were compromised. By providing this service and additional value engineering during the project, FE was able to complete the work and additional repairs under the original contract amount.
